

Homework 4

Instructions

- This homework focuses on understanding and applying CoCoOp for CLIP prompt tuning. It consists of **four questions** designed to assess both theoretical understanding and practical application.
- Please organize your answers and results for the questions below and submit this jupyter notebook as a **.pdf file**.
- **Deadline: 11/26 (Sat) 23:59**

Preparation

- Run the code below before proceeding with the homework.
- If an error occurs, click 'Run Session Again' and then restart the runtime from the beginning.

Q2. Training CoCoOp

In this task, you will train CoCoOp on the EuroSAT dataset. If your implementation of CoCoOp in Question 1 is correct, the following code should execute without errors. Please submit the execution file so we can evaluate whether your code runs without any issues.

```

In [ ]: # Train on the Base Classes Train split and evaluate accuracy on the Base Classes
args.trainer = "CoCoOp"
args.train_batch_size = 4
args.epoch = 100
args.output_dir = "outputs/cocoop"

args.subsample_classes = "base"
args.eval_only = False
cocoop_base_acc = main(args)

```

```

/usr/local/lib/python3.10/dist-packages/torch/utils/data/dataloader.py:617:
UserWarning: This DataLoader will create 8 worker processes in total. Our su
ggested max number of worker in current system is 2, which is smaller than w
hat this DataLoader is going to create. Please be aware that excessive worke
r creation might get DataLoader running slow or even freeze, lower the worke
r number to avoid potential slowness/freeze if necessary.
  warnings.warn(
/usr/local/lib/python3.10/dist-packages/torch/optim/lr_scheduler.py:62: User
Warning: The verbose parameter is deprecated. Please use get_last_lr() to ac
cess the learning rate.
  warnings.warn(
/content/ProMetaR/dassl/utils/torchtools.py:102: FutureWarning: You are usin
g `torch.load` with `weights_only=False` (the current default value), which
uses the default pickle module implicitly. It is possible to construct malic
ious pickle data which will execute arbitrary code during unpickling (See ht
tps://github.com/pytorch/pytorch/blob/main/SECURITY.md#untrusted-models for
more details). In a future release, the default value for `weights_only` wil
l be flipped to `True`. This limits the functions that could be executed dur
ing unpickling. Arbitrary objects will no longer be allowed to be loaded via
this mode unless they are explicitly allowlisted by the user via `torch.seri
alization.add_safe_globals`. We recommend you start setting `weights_only=Tr
ue` for any use case where you don't have full control of the loaded file. P
lease open an issue on GitHub for any issues related to this experimental fe
ature.

Q3. Analyzing the results of CoCoOp

Compare the results of CoCoOp with those of CoOp that we trained in Lab Session 4. Discuss possible reasons for the performance differences observed between CoCoOp and CoOp.

In terms of accuracy CoOp achieved 91.4%, while CoCoOp reached only 43.3%. CoOp had an error rate of 8.6%, significantly lower than CoCoOp's 56.7%. And CoOp performed better with a 91.5% macro F1 score compared to CoCoOp's 39.0%.

We know CoCoOp introduces the meta-network to adapt prompts based on image features, which can provide flexibility but also adds complexity. Dynamically adjusting the prompts should improve generalization across new classes. However, on EuroSAT dataset, which has clear and distinct classes, CoCoOp's dynamic adaptation introduces unnecessary variation whereas CoOp's fixed class specific prompts which are simpler, are more effective and allow better generalization when training data is limited (from the lectures we know CLIP requires lots of data). CoOp focuses on base classes, which are well-represented and frequently used during training. It likely retains more samples from the original dataset for evaluation, resulting in 4,200 test samples. On the other hand CoCoOp that is designed to generalize to new/unseen classes by adapting its prompts dynamically has targeted new classes in a few-shot setting and resulted in a reduced test set of 3,900 samples. I think this has led to overfitting and the poor performance of CoCoOp. As a result, the stability of non-adaptive prompts in CoOp is a better suite for EuroSAT data set and in this case has contributed to consistent and high performance. To summarize CoOp

prioritizes performance on known, well-represented data whereas CoCoOp prioritizes adaptability to new, sparsely sampled data.
